

Johnson & Johnson Issues Statement on September 27 Defense Verdict in St. Louis

September 27, 2021

“After careful consideration of the science and facts presented at trial, another jury unanimously agreed that Johnson’s Baby Powder is safe and does not cause cancer.

The three verdicts today in the company’s favor are now four claims in a row that have been unanimously rejected by juries in these cases. And yet, despite the lack of any scientific evidence to support their claims, the plaintiff trial bar continues to push forward with its misinformation campaign to drive baseless and inflammatory headlines in the hopes they can force a resolution of these cases. The claims by these lawyers are unfounded and it is clear the only interest they have is their own financial gain.

We deeply sympathize with anyone suffering from cancer and know they are seeking answers. That’s why the facts are so important – and the facts are that research, clinical evidence and over 40 years of studies by independent medical experts around the world continue to support the safety of cosmetic talc. To learn more about our position and the science supporting the safety of our product, visit www.FactsAboutTalc.com.”
